

OUR SAFARI VEHICLE

Remote wildlife travel in the African bush demands sturdy, dependable and well maintained 4x4 vehicles, that can easily tackle the conditions off the beaten track.

- All of our fleet, of specially converted Safari Toyota land cruisers, have large roof hatches, protected by a sunroof, as well as a smaller roof hatch in the front, allowing all the guests as well as the guide, an unobstructed game viewing experience.
- We have vehicles with 7 seats, and 5 seats, to allocate according to your party size.
- All seats are individual window seats, and are equipped with seat belts, so comfort and safety is guaranteed even when driving off road.
- All vehicles are equipped with VHF radio and a cellphone ensuring good communications with other safari vehicles and our base in Arusha.
- All our vehicles are also equipped with a coffee and tea set, a fridge to keep drinks cold throughout the day, inverter for electrical charging, first aid kit, various maps and guide books, bean bags for use with large lenses, 2 spare tyres, and off course a full mechanical tool kit.

* *Luggage storage space inside the safari vehicle may be reduced due to the number of bags. We therefore recommend to pack light, and bring only the essentials and highly recommend using soft duffel bags, which are much more manageable for your Tanzanian adventure.*
